

Sustainable Future – An example of a “whole school perspective” 2 July, 14:00

This visit intends to show how SKF Technical College (a Swedish upper secondary school) has implemented ESD with a whole school perspective. The visit will briefly describe their green profile “*Sustainable Future*” and present how they have made it possible by creating ESD-projects from the core contents in the Swedish curriculum. The school also has an interesting collaboration with SKF (www.skf.com) which supports the school with guest lectures and resources. To complete the visit there will also be students attending who will present their view of the project and their learning outcome of it.

The visit will take approximately an hour and will be held at the school, address Byfogdegatan 4 (five minutes’ walk from the tram station

“Gamlestadstorget”, 10 minutes from central Gothenburg. Tram number 6, 7 or 11). There are a maximum number of 25 participants, so go to the attached link and make your reservation.

For those who would be interested, SKF will also provide the opportunity for a short factory visit to their nearby site and the schools workshop (60 min). Please make the choice “both the school and the factory / schools workshop” if you are interested to join this visit in the form.
